

## **Year 6 Home Learning – Thursday 4<sup>th</sup> March**

### **MATHS**

Today you have a fractions challenge to try. The attachment 'maths part 1' is the initial task.

If you would like a challenge, you can try 'maths part 2.'

Enjoy!

### **ENGLISH**

For today's reading comprehension, use the attachment 'Battle of Britain.'

### **SCIENCE**

Your task this afternoon is an investigation focusing on evolution by natural selection. We look at the Galapagos islands in South America to study this.

1. Read through the power point 'Evolution by natural selection.'
2. Open and view the 'Galapagos map'. This describes the types of food available for birds on some of the different islands there.
3. Open and view the 'finches images' resource. Using the images of the different types of finches, as well as the information given about what they eat, decide which island each species might be found on based on what you know about the available food from point 2.
4. Record your answers on the 'prediction of finch distribution' resource or write down your answers in your book.
